Day 4. Friday, april 8, 2022

9:00 am | Opening session

Marine Parra (University of Bretagne-Sud), "Reusing data: from principle to implementation"

9:15 am | FAIRing Focus, feedback

Régis Witz (CNRS, MISHA), "From a database to an automated editorial chain: an example of data exploitation from the *Bulletin Analytique d'Histoire Romaine* (BAHR)"

The *Bulletin Analytique d'Histoire Romaine* (BAHR) has constituted a bibliographic and analytical database on Roman History in the broadest sense. The exploitation of the resources constituted from the analysis of more than 800 French and foreign journals dealing with the ancient Roman world entails the selection, the input and the scientific validation of the data. But how to use them, or reuse them, afterwards? We have set up an automated creation of web, PDF or textual documents, allowing us to save a considerable amount of time and to offer different views on the works carried out in the framework of research in history, archaeology, epigraphy, numismatics, papyrology and many other disciplines.

10:00 am | Session 1 "Infrastructures", moderated by Giovanni Pietro Vitali

J4. State of the art of infrastructures in the global context: Latin America.

The case of Latin America will allow us to examine a situation where the Digital Humanities community is extremely active and particularly attentive to maintaining a continuous exchange with other communities around the world. The exchange will lead to compare the working methods of South American colleagues to the ones used in Europe, and particularly France.

Dialogue with Gimena del Rio Riande

Gimena del Rio Riande - Professor at the University of Buenos Aires and associate researcher at Instituto de Investigaciones Bibliográficas y Crítica Textual (IIBICRIT-CONICET, Argentina)

11:00 am | Break

11:10 am | Session 2 "Editorial Charter", moderated by par Guillaume Porte

J4. Dissemination

Often, digital and paper are understood as opposite formats that imply two radically different processes. And yet, which book is not - today - prepared on a word processing software? If computers are already part of «classic» publishing, how can the same editorial work be distributed on different media?

Carmel Brando (EHESS), "Annotation, spatialization and analysis of historical textual corpora with the aid of TEI, NLP and geomatics".
Dominique Roux (University of Caen Normandie), "The METOPES chain".

12:15 | Lunch break

2:00 pm | Session 3 "Methods and tools", moderated by the OLIO group

Why remake, recreate or close when reusing and making it reusable is possible? Workshop led by Julie Aucagne (IR, MSH Ange-Guépin) and Bruno Baudoin (IE CNRS, Centre Camille Jullian, MMSH)

Encouraging the reuse of one's data, reusing data produced by others ... the intention is commendable, but in practice it often comes up against numerous pitfalls. How to avoid them? How can we allow others to appropriate our data and give them a second life, thus avoiding their falling into oblivion or obsolescence? How to document - really - our data to make them fully intelligible, without limiting ourselves to minimal metadata? What tools and work habits allow for reusability?

2:00 – 2:20 pm: Introduction to the session by Julie Aucagne and Bruno Baudoin

2:20 – 3:30 pm: Presentations

Stéphanie Satre (IR CNRS at the Centre Camille Jullian, MMSH) "Reusing ancient excavation data: the example of EpiCherchell"

Emilie Masson (legal expert for the CNRS Data Protection Officer), "What is the legal framework for the reuse of personal data?"

Régis Robineau (IE for EquipEx Biblissima / Campus Condorcet), "The IIIF protocol: making image, sound and video content interoperable and reusable on the Web"

Miled Rousset, (IE CNRS, Maison de l'Orient et de la Méditerranée), "Opentheso: a tool for building and publishing thesauri based on the semantic web"

Floriane Chiffoleau (PhD student at Le Mans University (3LAM) and Inria (ALMAnaCH), "Documenting the DAHN project"

Elisabeth Greslou (IR edition and digital corpus, LITT&ART - ELAN, Université Grenoble-Alpes), "The reusability vademecum of the CAHIER consortium"

3:30 - 4:30 pm: Round table with all the speakers
